Sensitivity: allele count vs. clustering threshold
(S-domain p-distance, average linkage)
0.0055
Total proteins in input (n=246)
Unique S-domain sequences at threshold=0 (n=113)
→ 133 proteins share their S-domain with another protein
(differ only in kinase / other regions)
N_ALLELES = 55 → 55 alleles obtained
Implied distance threshold ≈ 0.0055
Number of alleles
