

Reproductive effort support per Element Occurrence

Individuals with GFS > 0 carry 2+ distinct SRK alleles and can contribute allelic diversity to compatible crosses.

EOs ordered by parent BL (total habitat area, largest at top) then by mean Drift_index within BL.

Y-axis labels coloured by parent BL (Set1 palette).

Dashed line = TP2 threshold (<= 30% AAAA required to avoid CRITICAL).

Reproductive effort support per Bottleneck Lineage

BL aggregates all BL-assigned individuals (n = 359). BLs ordered by total habitat area, then within-BL connectivity (largest at top).

Y-axis labels coloured by BL (Set1 palette, matches LEPA_EO_spatial_clustering).

Dashed line = TP2 threshold (<= 30% AAAA required to avoid CRITICAL).
