

Independent ancestral bottleneck lineages of *Lepidium papilliferum*

Ward's D2 hierarchical clustering of 32 geographic groups | Silhouette-optimal k = 5 | C3 Hypothesis Stages 1 & 4

Ward's D2 linkage criterion

k = 5 independent bottleneck lineages

Annotation strips aligned leaf-by-leaf with the dendrogram above. DI strip: blue = large habitat (DI = 0, weak drift). red = small habitat (DI = 1, strong drift): labeled where DI <= 0.75. Census bar: fertile + vegetative plant count per group (max N = 1454).
