

Event-scale pollen-donor plant count per LEPA location (purely spatial, 50 m pollinator range, LEPA tetraploid)

Pollen-donor plants reachable within 50 m per event ($N_{\text{reachable_50m}} = \sum N_{\text{fertile}}$ in events within 50 m – 1)
Red dotted: N = 1 single-plant SI floor · Grey dashed: N = 8 plants = 32 tetraploid allele copies, the coupon-collector floor for the 32-Fg spe
