

Conservation ranking – Compatibility x Depletion (observed)

x = Depletion Index ($1 - k / k_{\text{species}}$; $k_{\text{species}} = 59$ from MM consensus).

y = Compatible-pair fraction under strict tetraploid SI ($L = 0$); vertical whisker = bootstrap 95% CI.

Observed Depletion Index uses $k_{\text{rarefied30}}$ (sample-size-corrected).
