

Allele–richness recovery ladder – best donor per tier

Stacked: current k(R) -> + best within-BL donor EO (novel) -> + best cross-BL donor source (additional, beyond within-BL).
Within-BL bar missing = no other focal EO in the same BL (EO70 in BL2; EO76 in BL3). Cross-BL donor is the best BL/EO source pool outside the recipient.

Dashed line: alleles observed across the entire dataset (k_{pool}). Solid line: species-level MM consensus ($k_{species}$).
