

This bubble plot displays occupancy data for two years, 2025 and 2026, across a range of longitudes from -116.8 to -115.4. The x-axis represents Longitude (°), and the y-axis represents an unlabeled variable. The legend indicates three categories of occupancy: 'both_years (22)' represented by purple circles, '2025_only (11)' represented by teal circles, and '2026_only (11)' represented by orange circles. The size of each bubble corresponds to the number of observations for that category at that longitude. The data points are clustered in several regions, with a notable concentration of 'both_years' data points between -116.5 and -116.1, and a cluster of '2025_only' and '2026_only' data points around -116.2. There are also isolated points at the extremes of the longitude range.
